

## GARDEN COURT ANTIQUES San Francisco, California 415 355-1690

Framed Botanical: Arbutus Unedo (Strawberry Tree), France Circa 1890

## List: \$1,400

This lithograph is one in a series of eight, illustrating Arbutus Unedo, commonly known as the Strawberry Tree. Native to the Mediterranean region, the depiction highlights its evergreen foliage, textured leaves, and the distinctive red berries which mature in autumn and characteristic of scientific botanical illustrations of the late 19th century, circa 1890. [1. <u>Binomial nomenclature</u>, the formal system of naming species of living things, was developed by <u>Carl Linnaeus</u> in the mid-18th century. Each species is assigned a unique two-part name: the genus name, which is capitalized, and the species name, which is not. This system, introduced in Linnaeus' seminal work <u>'Species Plantarum'</u> in 1753, brought a standardized and consistent method to the classification and naming of plants and animals, which is still the cornerstone of modern taxonomy. The nomenclature serves as a universal language among scientists and scholars, allowing for clear and precise communication regarding biological research. The enduring legacy of <u>Linnaeean taxonomy</u> is evident in these exquisite botanical lithographs, where the artistry of the past converges with scientific discovery.
