Set of Eight French Botanical Prints, Circa 1890

List: \$11,200

A collection of eight botanical lithographs from France, artistic renderings of botanical scientific study and illustration from the late 19th century. The prints are double matted and presented in gold frames; suitable for sophisticated interiors with historical and aesthetic value. [1. [Binomial nomenclature](#), the formal system of naming species of living things, was developed by [Carl Linnaeus](#) in the mid-18th century. Each species is assigned a unique two-part name: the genus name, which is capitalized, and the species name, which is not. This system, introduced in Linnaeus' seminal work '[Species Plantarum](#)' in 1753, brought a standardized and consistent method to the classification and naming of plants and animals, which is still the cornerstone of modern taxonomy. The nomenclature serves as a universal language among scientists and scholars, allowing for clear and precise communication regarding biological research. The enduring legacy of [Linnaean taxonomy](#) is evident in these exquisite botanical lithographs, where the artistry of the past converges with scientific discovery.
